Subject: Email #3: Eliminating Unnecessary Points from Vectors in VCarve PRO

We noticed and failed to mention, that the tutorial sent out yesterday (EMAIL #2 - March 24, 2020) included things at the end that were basically for woodworking and beyond the scope of what our members need to be concerned with at this time. So please pay attention to the first 12 minutes of the 'Importing DXF Files Tutorial'.

Also, we have since determined there is a second tutorial worth mentioning about the same subject matter.

Eliminating Unnecessary Points from Vectors in VCarve and Aspire

https://youtu.be/LnF1JASSRKM

This tutorial explains the reasons for eliminating the extra nodes and takes you through the steps we covered in the sheet on Cleaning up and Converting .dxf files to .crv files.

Thanks for all your hard work and keep learning!
