TO: All VCarve Pro Metal Club Members,

Vectric recently announced an update in their VCarve Pro software. Most of the new features pertain to Woodworking instead of Metal Art. Please look at the video below which discusses the new update features to VCarve Pro. Only the first 3:40 minutes about Drawing applies to metal art.

https://youtu.be/cMqLJ_kSx-M

All the computers in the Metal Club have been updated to Version 10.5. The reason for our updating these computers is that any new member choosing to learn VCarve only has the option of downloading the new 10.5 version. The shop computers can communicate with the new 10.5 version along with the ability to communicate with older versions.

For those of us who have been working with the old 10.1 version, you can choose to update your system or not to update your system. Please watch the above video and decide for yourself if it is in your best interest to update to 10.5. If you choose to update your Home Trial Version, click on the below link, next click on (Download VCarve Pro Trial). Next in the popup form select (Download as Guest). Next (Save File) and once it is downloaded click on (VCarveProTrailEdition-Setup.exe) to reinstall it.

When the upgrade is completed, you will be asked if you wish to migrate all information. Make sure you select "Yes", and the Makerspace ID will be transferred over to your newly upgraded version.

Please feel free to contact Larry Myers or Joe Faraone if you have any questions on this upgrade.
